

Expanded User Behavior Dataset

Overview

The **Expanded User Behavior Dataset** contains information about mobile device users, their daily usage habits, and demographic data. This dataset can be used to analyze patterns of mobile usage, battery consumption, and user engagement. It is structured to include various characteristics such as device model, operating system, screen-on time, app usage time, and user demographics like age and gender.

Dataset Structure

The dataset consists of 1,000 rows and 11 columns. Each row represents an individual user's data, capturing key information about their device and usage behavior.

File Name

`expanded_user_behavior_dataset.csv`

Number of Rows

1,000

Number of Columns

11

Column Descriptions

1. **User ID** (Integer): A unique identifier for each user.
2. **Device Model** (Categorical): The model of the user's mobile device. Examples: "Google Pixel 5", "OnePlus 9".
3. **Operating System** (Categorical): The operating system of the mobile device, either "Android" or "iOS".
4. **App Usage Time (min/day)** (Integer): The average daily time spent using apps on the device, in minutes.
5. **Screen On Time (hours/day)** (Float): The average number of hours the screen is on per day.
6. **Battery Drain (mAh/day)** (Integer): The average amount of battery consumed per day, measured in milliampere-hour (mAh).
7. **Number of Apps Installed** (Integer): The number of applications installed on the user's device.
8. **Data Usage (MB/day)** (Integer): The average daily mobile data usage by the user, in megabytes (MB).
9. **Age** (Integer): The user's age in years.
10. **Gender** (Categorical): The gender of the user, either "Male" or "Female".

11. **User Behavior Class** (`Integer`): A numerical class categorizing the user based on their behavior patterns. The specific meanings of the class values are not provided.

Usage

This dataset can be used for:

- **User Segmentation:** Identify different types of users based on their app usage, battery consumption, and demographics.
- **Behavior Analysis:** Study mobile usage patterns across different age groups, genders, device models, and operating systems.
- **Machine Learning:** Train clustering algorithms, classification models, or regression models to predict user behavior classes or derive insights from user characteristics.
- **Data-Driven Marketing:** Understand key demographics that prefer certain device models or consume more data and battery.
